

RISK OPERATIONS, WITHOUT THE NOISE

From risk signal to final decision. In one *workspace*.

See the payment. Understand the connections. Make the right call—with connected evidence and policy-controlled decisions.

Real-time

Transaction risk monitoring

Graph-led

Connected fraud intelligence

Policy-controlled

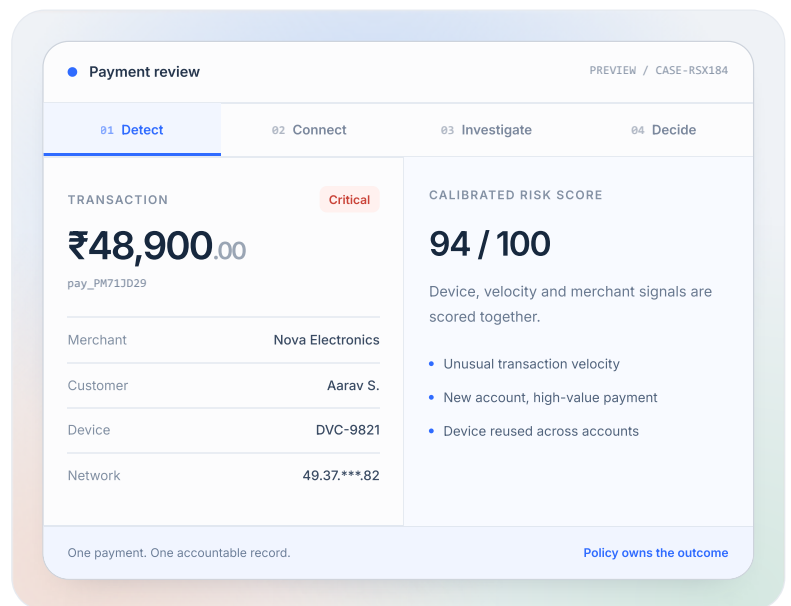

Accountable final decisions

Built for analysts, risk teams and developers.

The decision workspace

Built for the moment risk becomes real.

A payment moves through four accountable systems. Each adds evidence. Only policy makes the final call.

[See the complete workflow →](#)

Risk hides in the connections between identities, infrastructure and commerce. Graph intelligence turns those relationships into reviewable evidence.

Graph intelligence

- 01 **Shared infrastructure**
Device, network and instrument evidence
- 02 **Coordinated identities**
Eleven accounts resolved into one cluster
- 03 **Reviewable context**
Every direct and inferred link remains visible

Investigation intelligence

AI recommends. Policy decides.

The investigation agent compresses evidence into a reviewable recommendation. It never bypasses the enforcement boundary.

Clear ownership by design
Models detect risk. The agent explains. Deterministic policy allows, reviews or blocks.

Decision trail

Every system contribution is timestamped, attributable and available for review.

169 ms · payment received to policy enforced

ELAPSED	SYSTEM CONTRIBUTION	TRACE DR-10428
14:32:18.101	Payment received	₹48,900 · Nova Electronics
14:32:18.116	Model risk score	94 / 100
14:32:18.132	Graph intelligence	4 linked entities · cluster FRC-0184
14:32:18.251	Agent investigation	Coordinated payment behavior detected
14:32:18.267	Policy evaluation	Rule RS-204 triggered
14:32:18.270	Final decision	BLOCK

Core capabilities

From the first alert to the final audit. Explore the tools that bring your risk operations together.

One platform. 12 connected capabilities.

01-03 / 12

Real-time monitoring01

Understand every payment. Act on the risk that matters.

Review transaction signals, risk scores and policy outcomes from one live operating view.

Graph intelligence02

Connect the evidence. Uncover the bigger pattern.

Follow the relationships between identities, devices, networks, merchants and payment instruments.

Assisted investigation03

From scattered signals to a clear recommendation. Give your analysts the full picture.

Bring the strongest evidence into a reviewable investigation brief, with policy retaining control of the final decision.

→

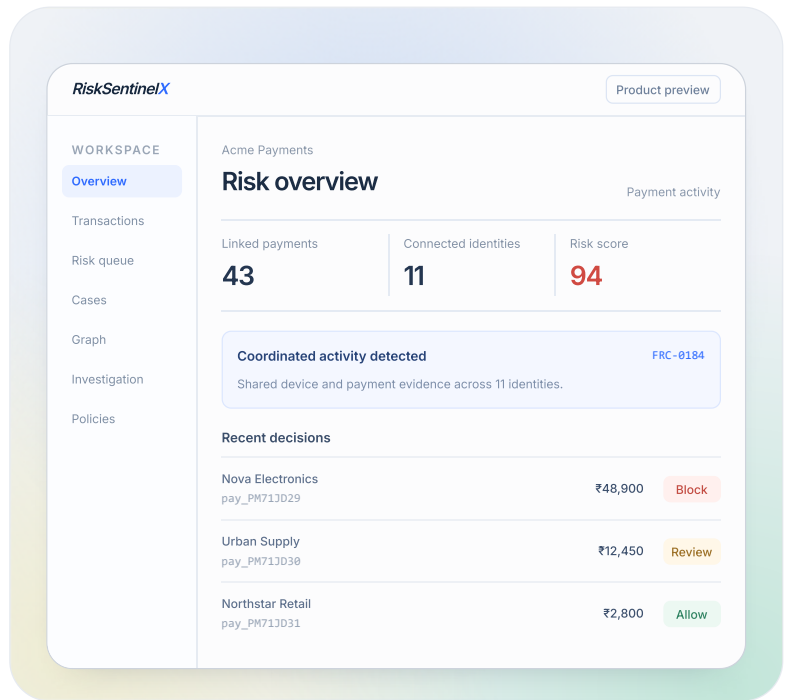

See it in action

See a payment become a decision.

Your entire risk operation, in one view. Follow a payment from its first signal to an outcome your team can explain.

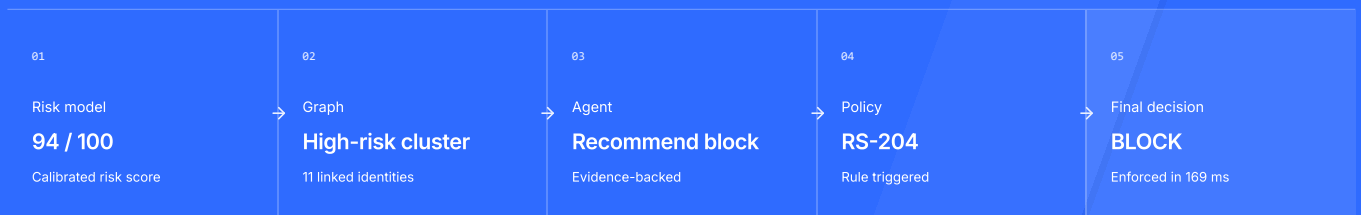

Open workspace →

Monitoring, investigation and policy, connected.

Governed decisioning

Every contributor remains visible from initial score to final enforcement. Recommendations inform the decision; policy owns it.
